(a) Information available during few-shot adaptation and inference

Localization-assisted examples

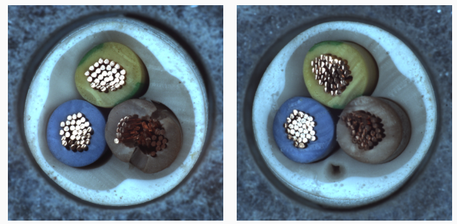

GT mask | Bounding box | ROI

Not provided in the few-shot protocol
(GT masks used only for the evaluation-only mask oracle)

THIS STUDY

Image-level supervision only: no masks, boxes or ROIs in adaptation or inference

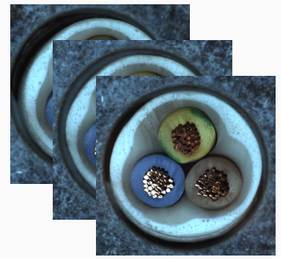

SUPPORT SET S (C0)

Cut inner insulation | Poke insulation

Whole image + image-level label

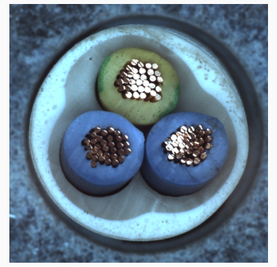

NORMAL IMAGES (C1)

5–20 unlabeled normal images

No labels, no masks

QUERY

Query image

Whole image only

State fixed before queries (zero training)

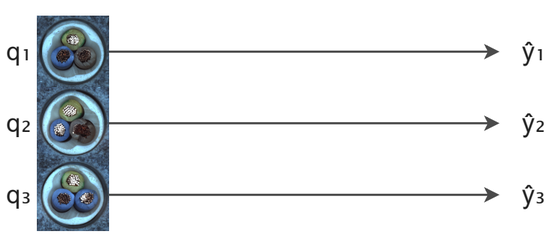

Independent prediction

(b) Query-access regime

Independent query inference

Model state fixed before queries arrive

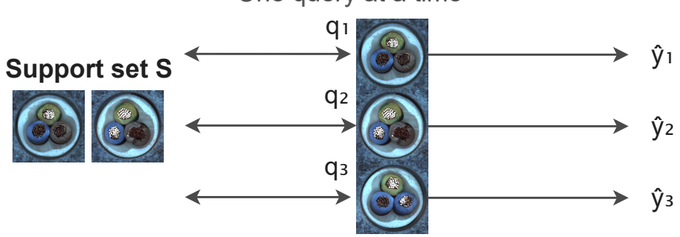

OURS

Parameter-free patch matching allowed; its cost is reported

Per-query support interaction

One query at a time

Collective transduction

Joint query set
